To Whom It May Concern:

I am an American nuclear physicist and former National Security Agency instructor, I have also been a Staff Scientist at the Lawrence Berkeley Laboratory – where more than nine Nobel prizes have been won.

With respect to the Canadian inventor, John Hutchison, this man is demonstrably a brilliant scientist who has made major advances in several fields, including antigravitic systems where John has been the worldwide leader.

More recently, John has developed a system which acts to dramatically reduce the negative effects of sea water pollution caused by oil spills. In fact, John has experimentally tested his equipment in the Gulf of Mexico with good results.

I very much encourage the American government to once again bring John Hutchison to this country so that he may help the United States.

Kindly,

Dr. Robert W. Koontz
Experimental Nuclear Physicist
